TigerForge **UniDB**

INSTALLATION
Follow these steps to install UniDB the first time.
If you need to update an existing installation, follow the UPDATE steps below.

1. Unzip the Server application in your web hosting, in a dedicated folder.
2. Launch the install.php file and follow the instructions.
3. Once installed, you can create all the Databases configuration you need.
4. Generate the C# code to copy and paste into the UniDBConfig.cs file in Unity.

UPDATE
Follow these steps to update an existing installation of UniDB to a new version.

1. Unzip the Update.zip file inside the special folder created by UniDB containing the core files. It's NOT the root folder (*for your reference, where the index.html file is placed*).
